The geometric algebra (GA) of a vector space is an algebra over a field, noted for its multiplication operation called the geometric product on a space of elements called multivectors, which is a superset of both the scalars and the vector space. Mathematically, a geometric algebra may be defined as the Clifford algebra of a vector space with ...

Quantum entanglement is a physical phenomenon which occurs when pairs or groups of particles are generated, interact, or share spatial proximity in ways such that the quantum state of each particle cannot be described independently of the state of the other(s), even when the particles are separated by a large distance "instead, a quantum state ...

Introduction to Computational Quantum Chemistry: Theory

In this manuscript the experimental methods recently developed to study the mechanical properties of 2D materials are reviewed. A thorough comparison between the mechanical properties of various 2D materials with very different properties (conductors, semiconductors and insulators) is presented.

The principles of quantum mechanics were formulated by many people during a short period of time at the beginning of the twentieth century. Max Planck wrote down his formula for the spectrum of blackbody radiation and introduced the constant that now bears his name in 1900.
