

### homotopy theory of the pdf

Formally, a homotopy between two continuous functions  $f$  and  $g$  from a topological space  $X$  to a topological space  $Y$  is defined to be a continuous function  $H: X \times [0,1] \rightarrow Y$  from the product of the space  $X$  with the unit interval  $[0,1]$  to  $Y$  such that, if  $t=0$  then  $H(x,t) = f(x)$  and if  $t=1$  then  $H(x,t) = g(x)$ . If we think of the second parameter of  $H$  as time then  $H$  describes a ...

### Homotopy - Wikipedia

Background. The study of homotopy groups of spheres builds on a great deal of background material, here briefly reviewed. Algebraic topology provides the larger context, itself built on topology and abstract algebra, with homotopy groups as a basic example.

### Category Theory authors/titles recent submissions - arXiv

Discrete Mathematics provides a common forum for significant research in many areas of discrete mathematics and combinatorics. Among the fields covered by Discrete Mathematics are graph and hypergraph theory, enumeration, coding theory, block designs, the combinatorics of partially ordered sets, extremal set theory, matroid theory, algebraic ...

(e.g. Wirthmuller 12, p. 17) As a special case this implies the first statement above: For  $X = * X = \text{ast}$  the product theorem prop. says in particular that the first of the two morphisms in the composite is an isomorphism (example below) and hence by the two-out-of-three-property for isomorphisms it follows that
